SB VERTICAL SUMP PUMP.

All SB Vertical Sump pumps are designed specifically for wide applications and use and feature robust design with ease of maintenance. The SB - VSP sump pump range is one of the strongest, toughest and most reliable pumps in the market.

The SB - VSP pumps are easy to install, The materials used are the very best available, providing both excellent wear properties and corrosion resistance. Wear parts are available in a variety of different materials and fully interchangeable. Semi-open, vortex, fully recessed vortex and closed impellers are available to suit your pumping needs.

The wet-end parts are designed for the toughest applications and the longest wear life. The single volute and generous solids passages through the pump ensure a safe and clogless operation. The wet-end assembly is suspended from a tubular column below the bearing housing. Standard pumps are supplied with wide choice of material.

Ranges :-

- Head – upto 80 Mtr.
- Discharge up to - 1000M3/Hr.
- Suspension depth upto - 6mtr.
- Temperature - (-)30Deg. To (+)180 Deg.
- Speed - 1450/2900 RPM.

Application :-

- | | |
|--------------------|-------------------------|
| Dewatering | Corrosive liquid |
| Sump Drainage | Intakewell |
| Mill scale | Boiler Blow down |
| Sewage stations | Coal dust and coal pits |
| Hazardous, Toxic | Slurry pumping |
| Inflammable liquid | Industrial Process |
| Clear water | Pollution control. |
